## Breathe Into Your Massage

### Mindful Breathing Enhances Bodywork Benefits

Cathy Ulrich

During her massage, Elaine was having trouble relaxing, continually talking about all of the stressors in her life. I took a deep breath and asked her to do the same. Suddenly, her body relaxed and I finally felt her respond to the work I was doing. So, what shifted with that simple suggestion?

#### In The Moment

Elaine was thinking about the stresses in her life instead of where she was at the moment. She was in a safe space, receiving gentle, supportive bodywork. And yet she couldn't relax. By simply asking her to be mindful of her breath, she immediately felt her body and became present with me in that space.

control labor pain. By consciously breathing during contractions, they learn to shift the feeling of pain to just sensation.

Elaine came to see me because she had chronic pain in her foot, knee, and hip. Often chronic pain sets up as a vicious cycle of muscle tightness, impaired blood flow, and more pain, even in areas distant from the original problem. When I asked Elaine to send her breath to the foot, she changed her feeling of pain to simply sensation and this opened a door that allowed me to change the holding pattern in her tissue.

Of course she couldn't physically breathe into her foot, but the imagery of

*The natural healing force in each one of us is the greatest force in getting well.*  
-Hippocrates

Mindful breathing brings an individual back into their body, facilitating presence and relaxation.

Many meditation traditions use the breath to quiet the mind. With mindful breathing, we're suddenly thrust into an awareness of our inner spaces and a feeling that we actually do live in a body.

#### Reduce Pain

One of the first things expectant mothers learn in natural childbirth classes is breathing techniques to help

sending warm, healing breath into her foot from the inside while I worked on it from the outside changed her relationship to the pain.

Try this simple technique yourself. As you tune into your breath, notice your body. Is there discomfort or pain?

Breathe in, and think of filling your lungs with healing oxygen. Now breathe out, and imagine sending this warm, healing oxygen directly to the place that hurts. Continue gently breathing into the area for a few minutes. What does it feel like now?

## Relieve Stress

When I worked with Elaine, I noticed that the more she talked about her stressful life, the shallower her breath became. She was breathing high in her chest in short, rapid breaths. Her mind had transported her back to her stressful life, even though she was in a place where she was supported and encouraged to take a break from that stress, putting her body into a fight-or-flight response.

One clear manifestation of this is rapid, shallow breathing. While stress can produce this breathing pattern, the good news is that we can consciously change the breathing pattern and reduce the stress. It works both ways.

As I asked Elaine to slow her breathing and take deeper breaths, the tension in her face softened. Her body relaxed on the table as if she were sinking into the padding. Her feet became warmer, a sure sign that her circulation had changed and that her nervous system had switched from fight or flight to the calming mode of rest and digest.

Try this for yourself. The next time you're feeling stressed, stop for a moment and notice how you're breathing. Is your breath high in your chest? Is it fast and shallow? Now, gently invite your breath to slow down. Start to pull breath into your lungs by letting your belly relax and expand as you inhale. Spend a few moments with yourself and your breath and look at the stressful situation again. Does it seem so bad now?

## Your Massage

Receiving a massage does involve participation on the client's part. While the practitioner is the expert on the bodywork, the clients are the experts on their bodies. In our culture, the client/therapist relationship is often a check-your-body-at-the-door affair. But so much more can happen when the client works with the therapist.

The next time you go for a massage, try these suggestions to achieve mindful breathing and enhance the benefits of your session:

- As you settle onto the table, feel the weight of your body on the table and begin to notice your breath.

- Feel your breath moving of its own accord. Where is it most noticeable? Bring into the spaces that feel less full (without effort--just invite).

- When your therapist starts working, notice the pressure and rhythm. When your practitioner lets up on the pressure, breathe in. When she/he applies pressure, breathe out.

- If your practitioner comes to a tender area, pay special attention to your breath. Work with the tenderness on the exhale, imagining that you're

breathing out the pain.

- As your therapist works on different areas, imagine your breath moving there to meet her. Send your breath wherever she is working. Let her work on the outside, you work on the inside.

- Notice the changes as the massage progresses. Notice your thought patterns. Notice your comfort level. Notice your stress (and how it melts) as you send breath to the various areas of your body.

- When your session is complete and you sit up, notice how your breath feels. What do you notice about your body, the room, the light?

Why not use the lifegiving force of breath to make your next massage an even more beneficial experience. Just breathe.

**Being actively aware of your breath during a massage enhances the benefits of your session.**

# Massage for Your Teenager?

## Bodywork Can Ease Adolescent Angst

While teens may be less likely than their parents to go to a massage therapist, there are plenty of reasons why this age group should be encouraged to give it a try. The benefits of massage are well documented, among them relief of muscle tension, lowered stress hormones, increased sense of relaxation, improved immune function, and even a heightened ability to concentrate, according to studies conducted by the Touch Research Institute at the University of Miami School of Medicine. But for teenagers, there's an additional payback.

The teenage body is in the midst of transformation -- exponential growth and development in a rapid period of time. On the physical side, teens may be at increased risk for aches, pains, and injury. Many teens strain their bodies with competitive sports, get erratic sleep, and consume a less-than-optimal diet. Massage can help muscles recover from overuse, and help balance the body and maintain that stability.

Perhaps even more crucial, teen massage can help improve body image and sleep patterns, and contribute to decreased depression, anxiety, and stress. This keeps a teen connected to her body, even as it morphs in confounding ways. "Many teens are self-conscious, and not happy with their bodies," says Eiris Kallil, massage therapist and shiatsu instructor at the Boulder College of Massage Therapy, in Colorado. "Massage can help teens stay grounded." Bodywork has also been reported to help mediate eating disorders, a growing concern among teens.

Another potential plus: A beneficial, therapeutic relationship can develop between bodyworkers and teenagers during the years when adolescents need adult confidantes, but keep parents at a distance. The practitioner can become a supportive, trusted adult in a teen's life. And the session itself, according to Kallil, can be a way to deal with all the physical and emotional turmoil of this tender age.

Massage eases teen depression and anxiety.

# The Scoop on Meditation

## A Simple Practice with Profound Benefits

People who meditate regularly appear internally and externally five to 10 years younger than their non-meditating peers, according to author Deepak Chopra. That's good news for the estimated 10 million people who practice meditation on an ongoing basis and experience the resulting calm it cultivates.

The rich benefits come from doing something that looks like nothing: Sitting still, being quiet, and breathing deeply. Meditation works simply but profoundly by defusing the onslaughts of life - a racing mind, busyness, deadlines, commutes, all of which have physiological effects on well-being. Meditation calms the nervous system, decreases metabolic rate, heart rate, and blood pressure, and lowers levels of cholesterol, stress hormones, and free

radicals. It also has a direct effect on breathing, slowing and deepening respiration so more oxygen circulates throughout the body. Not only that, meditation is said to lessen feelings of anxiety and depression and improve memory and concentration. And all of this culminates in slowing the aging process, as Chopra notes.

There are many meditation techniques, including focusing on a mantra, a sacred word or phrase, or your breath. But the basic intent of all meditation is focus and attention. And it doesn't take hours a day in an ashram to meditate effectively. Benefits kick in with even a short period of devoted time.

How to begin? Wear comfortable, unrestrictive clothes, sit on a cushion or chair with your back straight (think once

again, comfort), rest your hands on your legs, let your eyes go soft and out of focus or close them, breathe slowly and deeply, and - the hardest part - attempt to empty your mind of thoughts and quiet the internal dialogue. When thoughts flit through your mind, let them pass without judging them and come back to your focus (your mantra, counting, etc.) and breathing.

Start with this sitting meditation technique for five minutes a day, and add on time as you get more at ease with the process. For more information on techniques and benefits, check out [www.abc-of-meditation.com](http://www.abc-of-meditation.com).

health.*

*-Dalai Lama*

We are trucking along here at Releaf and can't believe it's already Sept!

With the importance of proper ventilation, I wanted to bring attention to the new AC unit & heat pump at the office. The unit was replaced in addition to full service and new filters back in June. We also still have HEPA air purifiers in each treatment room, and the option to open windows.

On a more recent note, we welcomed a new team member Evan Kleinhaus, LMT. Check out his bio online. He will be providing weekend availability as his schedule allows.

Finally, starting October 1, 2020, for existing clients, the rate per treatment will increase \$5, and look as follows:

30 minutes-\$50  
45 minutes-\$65  
60 minutes-\$75  
75 minutes-\$90  
90 minutes-\$100

\*Effective immediately for new clients. The updated price is reflected on the scheduler and instant gift certificate site.
